

SOLAR WATER HEATERS

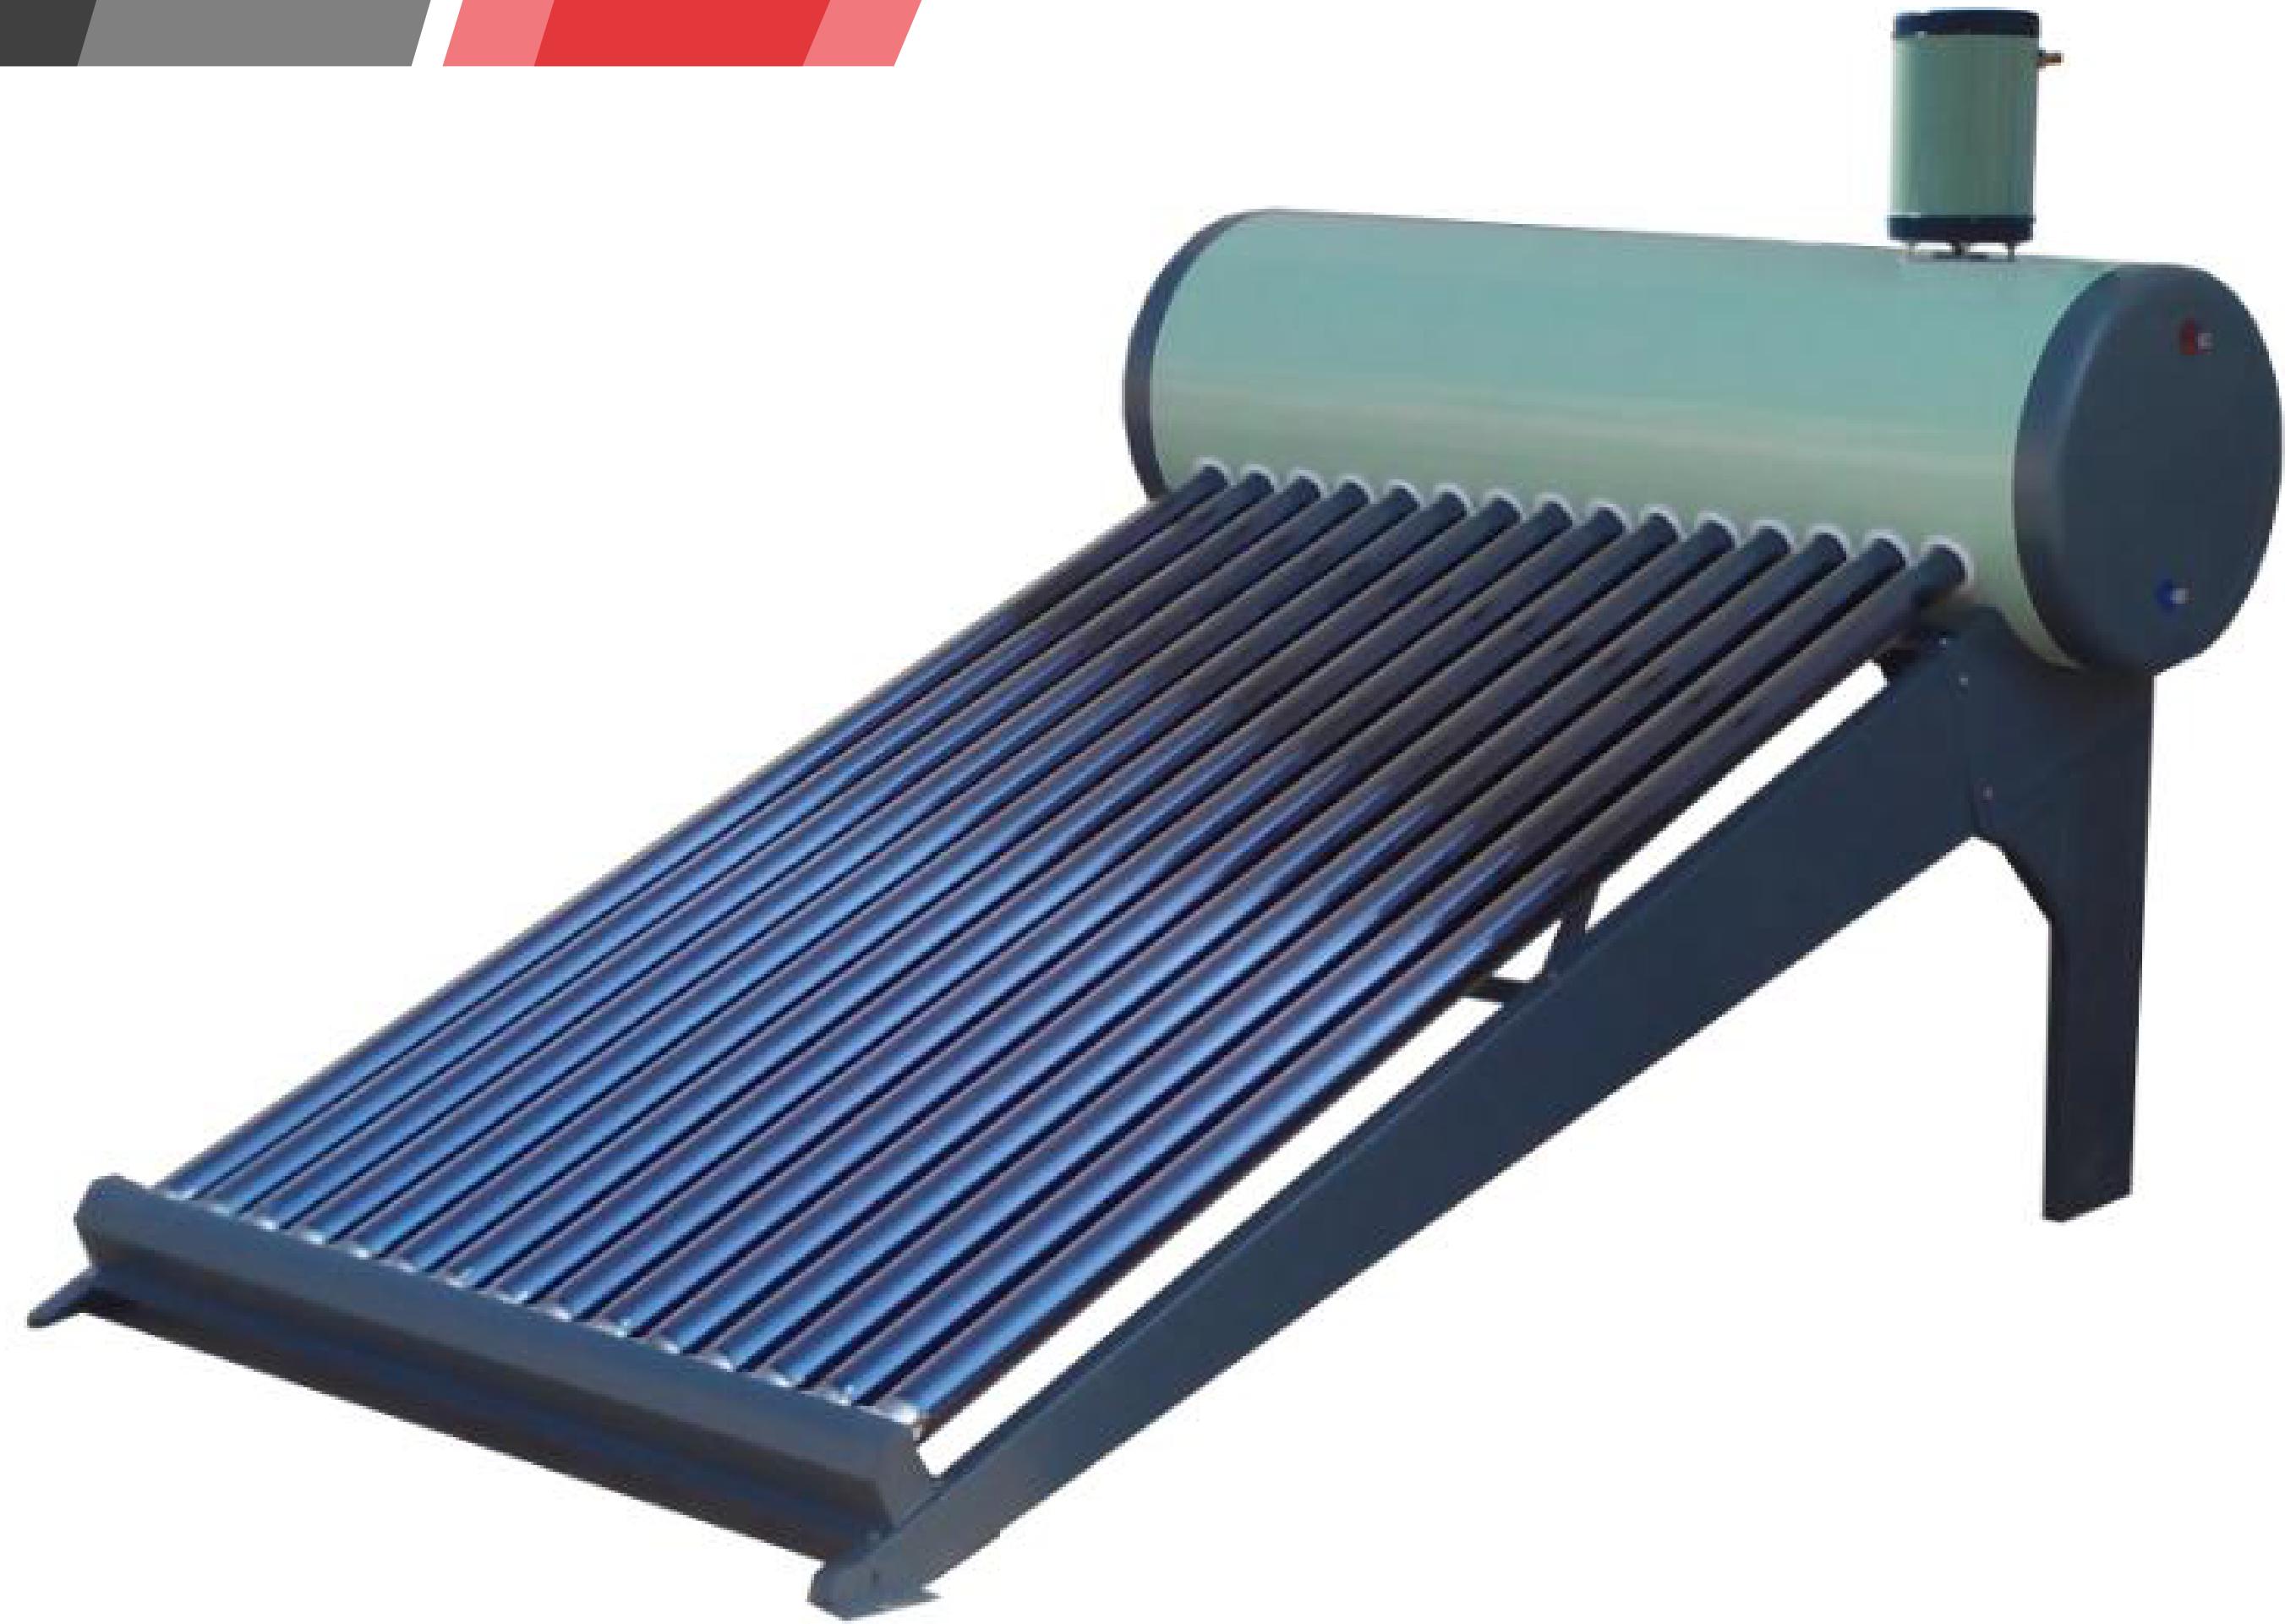

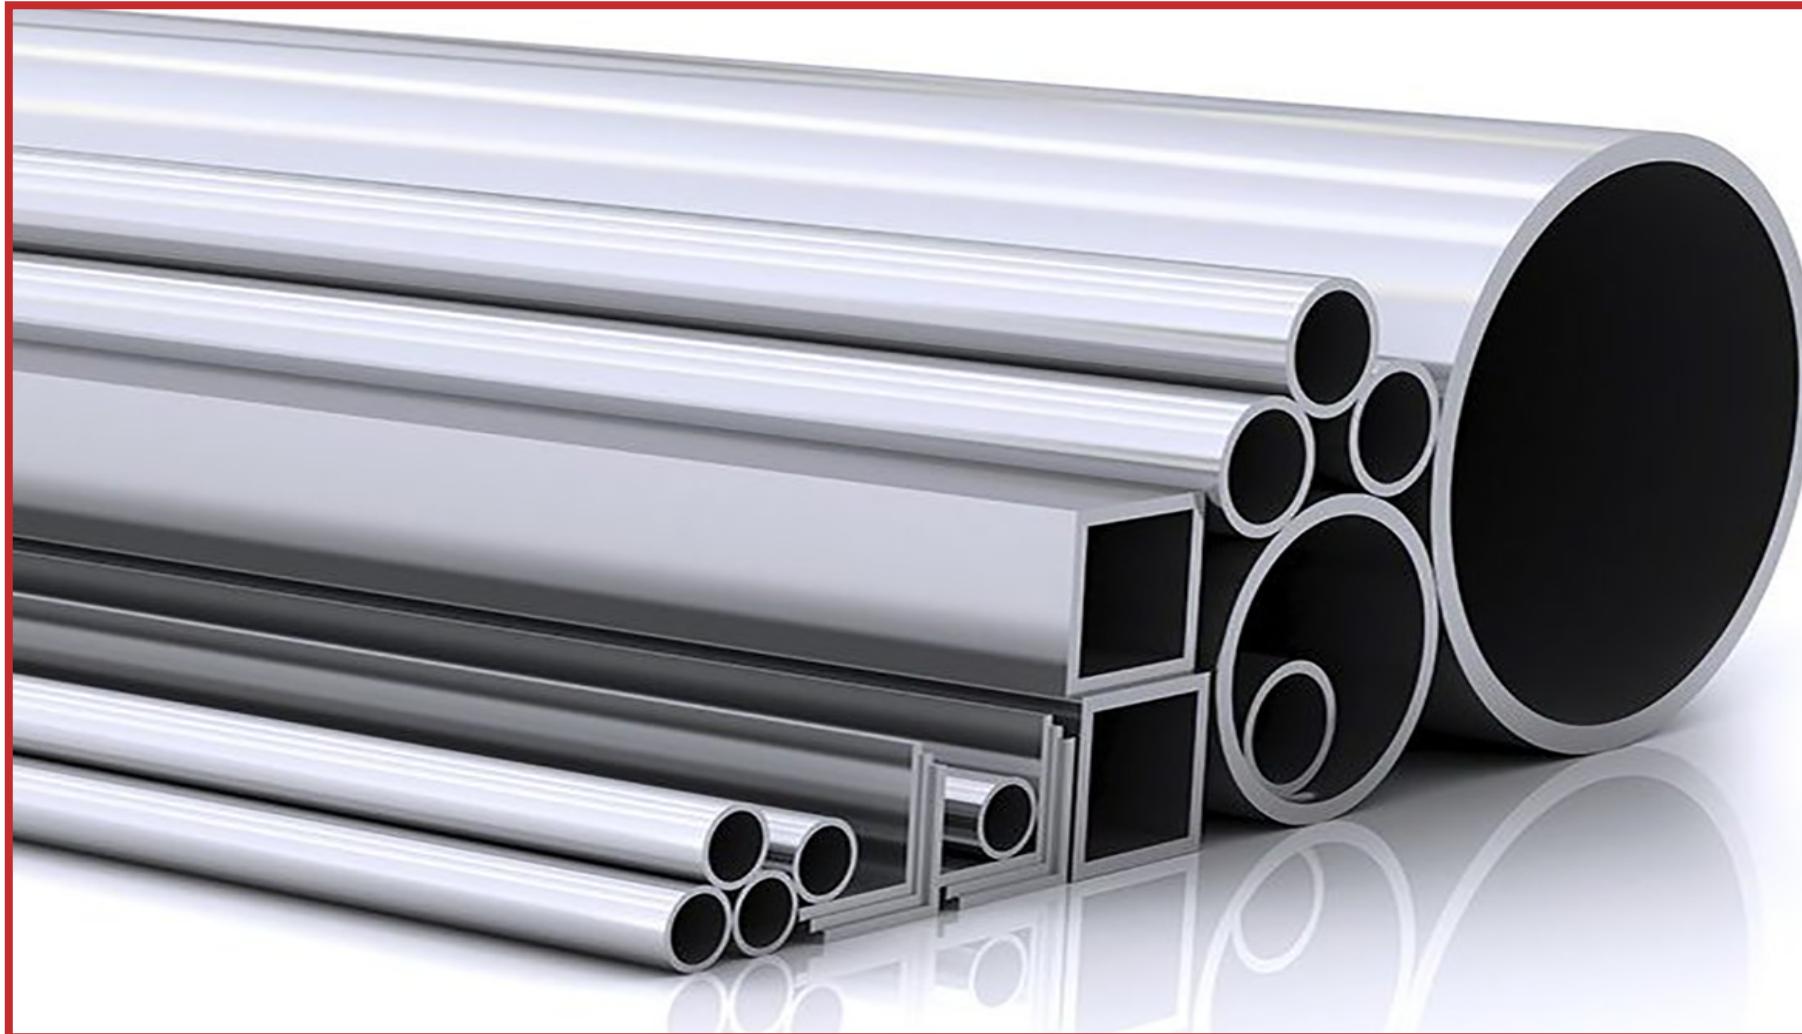

THE NON-PRESSURE SERIES

PRODUCT

FEATURES

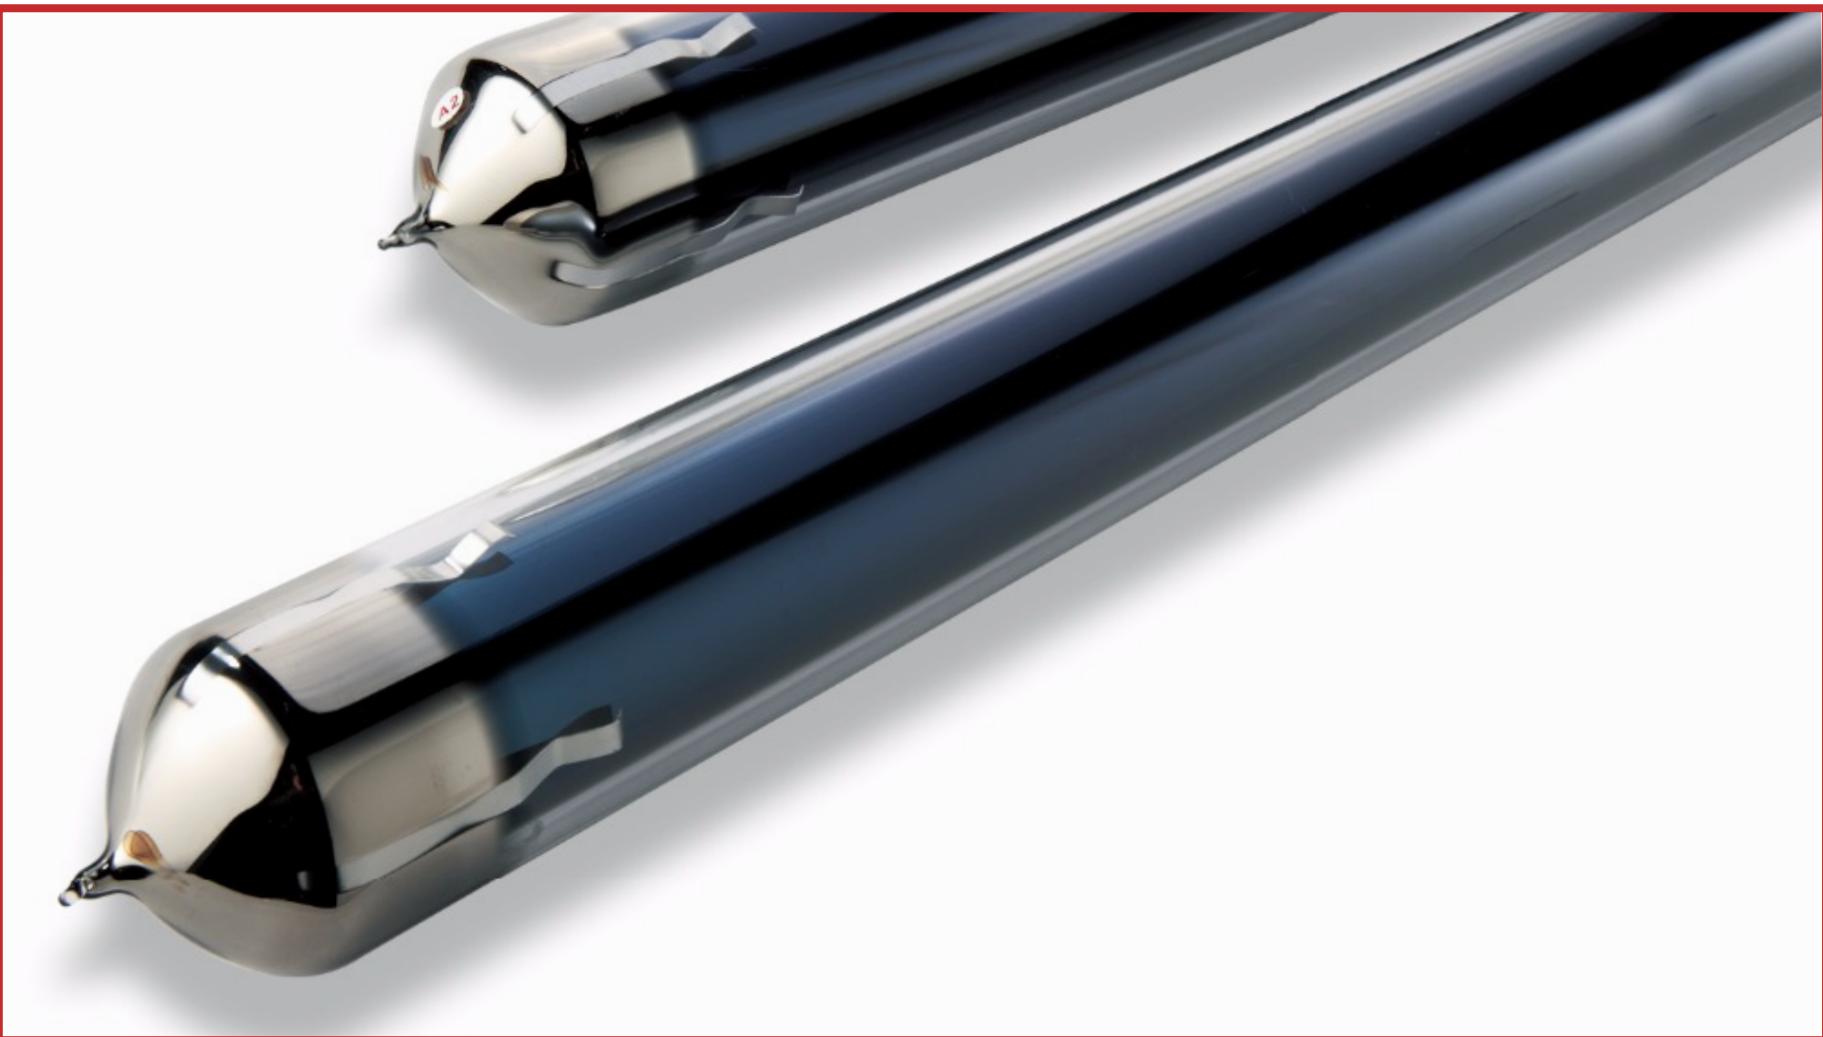

The solar water heater tank is made of stainless steel making it resistible to rust.

The tank is coated with insulating foam to prevent loss of heat to the atmosphere.

This ensures the water in the tank remains hot overnight allowing you to have an ample supply of hot water in the morning.

FEATURES

The vacuum tubes are made of borosilicate glass and coated with "cremet". This enable them to absorb the infrared rays of the sun for heating of the water.

The vacuum tubes are also able to resist the corrosive nature of hard water sourced from boreholes ensuring optimum performance of the system.

The controller that allows you to boost the water temperature using electric power in the cold months of the year. It allows you to monitor the temperature and water level of the available water in the tank.

It is also fitted with an automatic refilling system that eliminates the hustle of manually switching on the water pump.
